

AJ Uppal

Software Engineer | Bay Area, CA

650-823-9367 | aj8uppal@gmail.com | github.com/aj8uppal | linkedin.com/in/aj-uppal

SUMMARY

Software Engineer with 4+ years of professional experience building full stack and platform systems across healthcare, fintech, and education. Specializes in configurable integration platforms, AI voice workflows, healthcare interoperability, and production telephony. Track record of shipping 0-to-1 capabilities, leading cross-functional technical initiatives, and turning bespoke engineering work into scalable, productized systems.

TECHNICAL SKILLS

Languages & Frameworks: TypeScript, Python, React, Node.js, PostgreSQL, Temporal, GCP, Kubernetes, Terraform

Voice Integrations: Twilio, SIP/telephony, REST APIs, FHIR, HL7, Epic, Oracle, athenahealth

PROFESSIONAL EXPERIENCE

Notable Health | Software Engineer

Aug 2022 - Present

San Mateo, CA

- Built and maintained core full stack capabilities for a healthcare integration platform serving 100+ enterprise customers, shipping product and platform features across TypeScript, Python, React, PostgreSQL, and Temporal.
- Led design and delivery of 0-to-1 platform capabilities for AI voice assistants handling 250,000 calls/month in production healthcare workflows, including agent orchestration, state management, deployment tooling, and reliability improvements that improved uptime to 99%.
- Developed configuration UIs and reusable platform primitives that moved customer-specific workflows from engineering into productized configuration, reducing time-to-launch for new customers from weeks to days and eliminating recurring engineering support requests.
- Owned inbound voice authentication end-to-end: designed and implemented call routing, SIP integrations, transfer logic, and secure, authenticated handoffs to customer call centers, enabling HIPAA-compliant caller verification across 5+ health systems.
- Built integration patterns across FHIR, HL7, Epic, Oracle, and internal APIs to support appointment scheduling and patient workflow automations, connecting dozens of EHR systems for enterprise healthcare customers.
- Technically led projects, owned architecture decisions, partnered cross-functionally with product and operations, and mentored junior/mid-level engineers.

Harvest Fintech, Inc. | Software Architect, Software Engineer

Jul 2021 - Jan 2022

Remote

- First significant engineering hire at a stealth fintech startup; shaped backend architecture and data model for a mobile financial product. Built backend and database systems using Flask, React Native, and PostgreSQL.

UMass Amherst, Physics Department | Student Software Developer

Jan 2021 - May 2022

- Modernized internal academic software used across 20+ courses and 1000+ students, migrating a WordPress/JSON system to an Express/React/PostgreSQL application deployed on-site.

The Arena, Inc. | Software Engineering Intern

Apr 2020 - Sep 2020

- Built and deployed a React and database-backed platform on GCP to help students from non-traditional backgrounds discover careers and programs.

Got It AI | Software Engineering / AI Intern

Jun 2019 - Aug 2019

- Developed product features including a Chrome extension and automation microservices supporting AI learning tools and demo workflows.

EDUCATION

University of Massachusetts Amherst | B.S. in Computer Science and Astrophysics

2022

Dean's List, Honors Thesis
